

# DiagnosUs

## Skills

Amplitude

Chartio

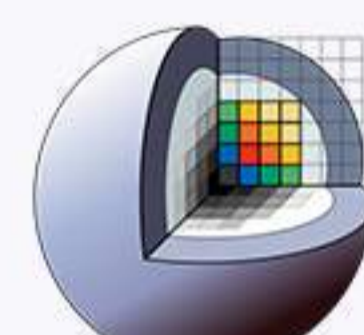

User Interface/Experience

Xcode

Medical Labing

Segmentation-3D Slicer

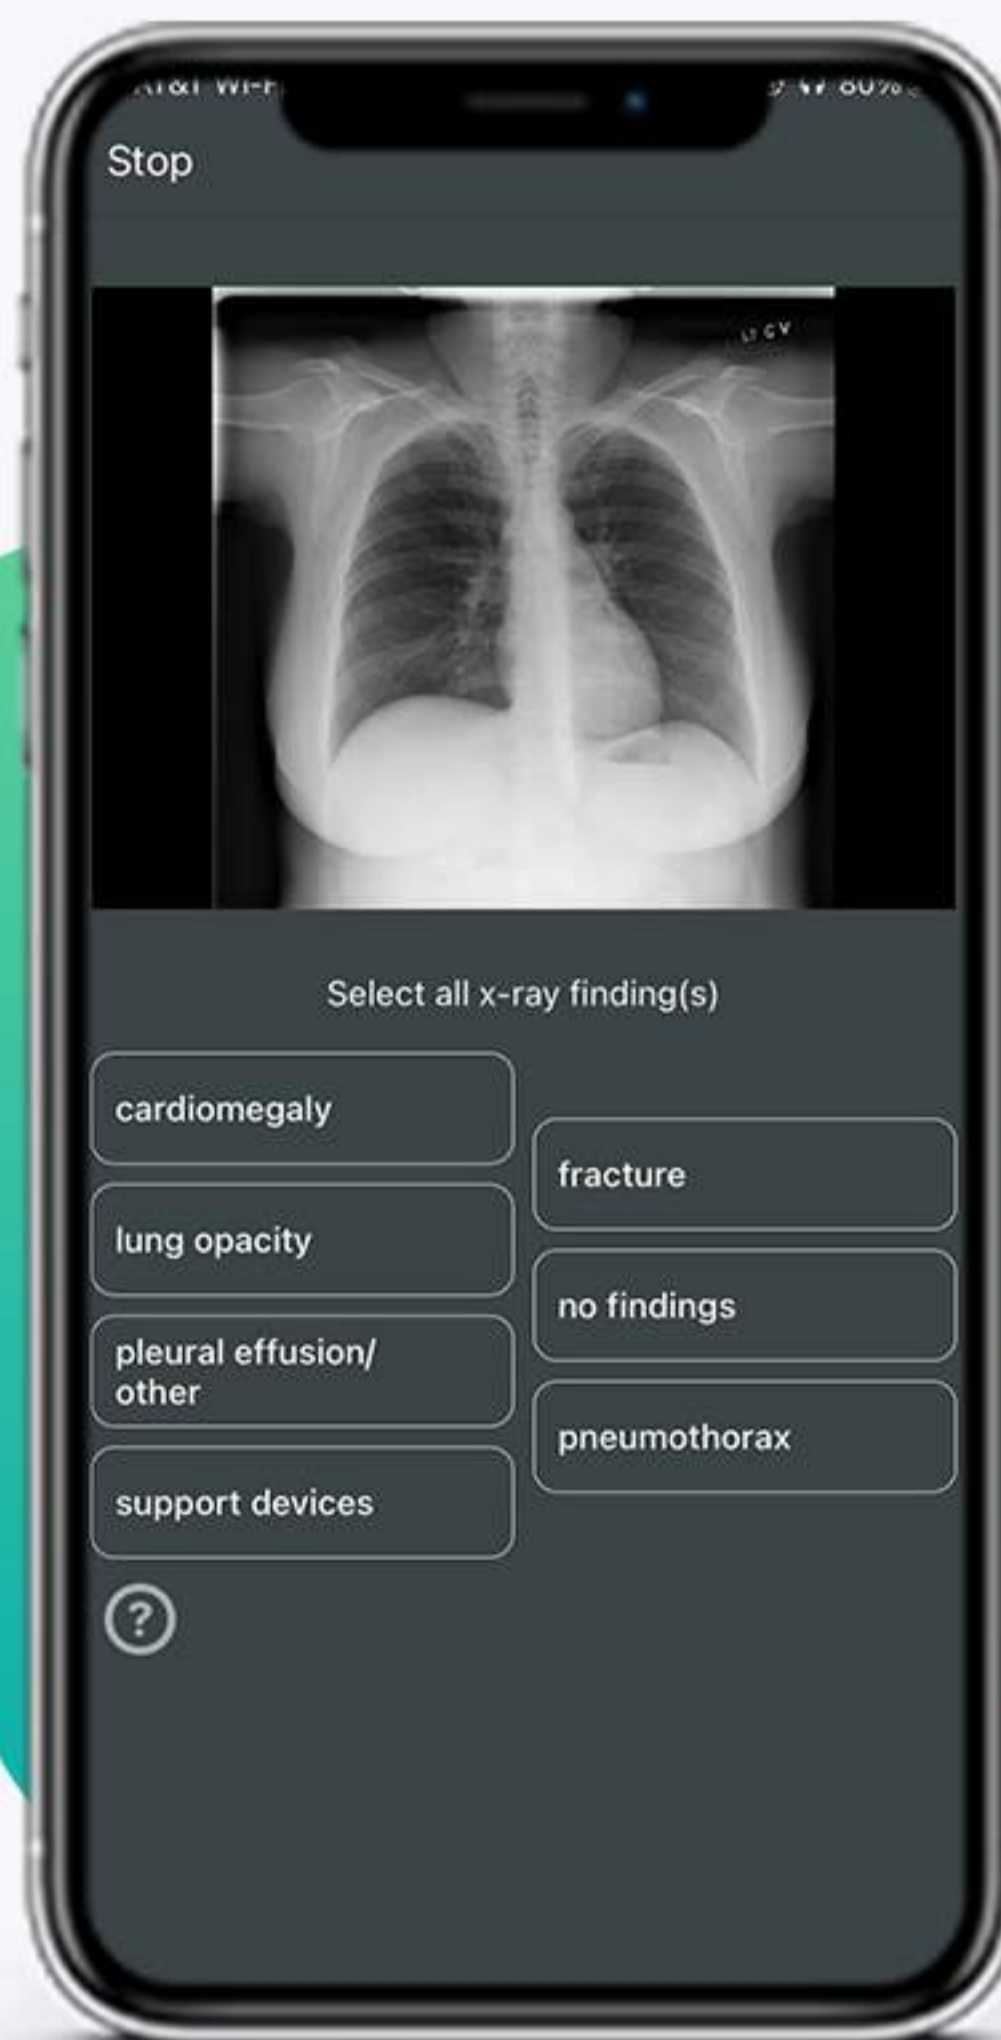

## Application

Users compete in contests for monetary rewards while simultaneously contributing to building machine-learning models!

## Product Associate

- Analyze decision-making in the app's users and develop data-driven decisions to improve user retention.
- Improve the content of the app drawing upon my background in pedagogy.
- Conduct product interviews with users to take criticism and potential ideas and turn them into a more substantial product.

## Quick Facts

- Users from 200+ medical schools from around the world.
- Over 30,000+ downloads.
- We label data from segmentations/annotations to classification models and auditory data.

## Importance

This data is important for research, as machine-learning requires medical labels to reduce errors and improve diagnostic accuracy.
